

Assignment of User Rights Referring to Klaes-Internet-Update

When starting the program it is automatically searched for messages and new updates on the KLAES-Server. But it is also possible to search optionally from the start center via menus „**Help/software updates/search for software update...**“, or „**Help/Search for KLAES – messages via the Internet...**“

Depending on the employee's task or the workplace, the user rights for this function must be adjusted accordingly.

Messages

Messages from the KLAES-Server are important for each program user, since useful information about program developments, update announcements or newer documentations referring to the program are distributed.

Software update

Here software updates or patches are directly downloaded by the KLAES-Server via the Internet. These updates are important to ensure the functionality of the program.

The system administrator should install an update because special rights referring to the SQL-Server might be necessary. During the installation of updates the program is blocked for all other users.

In advance the user rights should be set for all other users accordingly.

These rights are set in the business master data.

Section „ Master Data/System/User “ on the tab „ Module “ → „ Commercial Modules “	 <p>Master data</p>
→ Rights / Start center / Commands / General“	<ul style="list-style-type: none"> ● Search for KLAES - Messages in the Internet ● Automaticall Search after KLAES Messages
→ Rights / Start center / Commands / Software updates“ (Example above : The employee receives the information if an update is available. But he will not be able to install it.)	 <p>Softwareupdates</p> <ul style="list-style-type: none"> ● Import Softwareupdate ● Search for Softwareupdate ... ● Automatical Softwareupdate search
